exemplification of the

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used

Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and

joint

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                             The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                               Best
                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                        DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF5909 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

CC novel assembled cDNA (see AAH26343) based on Hyseq clone number CC 16372272. The protein has a mol.wt. of 14 kDa unglycosylated. GRLP CC belongs to the same protein family as growth regulatory proteins, CC growth factors, human melanoma derived growth regulatory protein CC precursor (64% similarity and 45% identity over 111 amino acids) CC or melanoma inhibitory activity, cattle carrilage-derived CC retinoic acid sensitive protein (CD-RAP, 44% identity and 64% CC similarity over 126 amino acids) and other retinoic acid-sensitive protein (co-RAP, 44% identity and 64% CC similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polynucleotides of the invention CC and be used in the prophylaxis, treatment (including gene therapy) CC and diagnosis of disorders and diseases caused by or involving, CC artilage development and maintenance, inhibition of melanoma cell corwth and tumours, including neuroectodermal tumours such as CC gliomas. The polypeptides, which include the GRLP mature protein, CC may also have nutritional uses, cytokine and cell proliferation or differentiation activity, tissue growth activity, CC immunosuppressive or immunostimulant activity, haemostatic and CC activity, chemostatic chemokinetic activity, activin/inhibin CC activity, and treatment of leukaemia, nervous system disorders, activity, and irelammation of leukaemia, nervous system disorders,

                                                                                                Matches
                                                                                                                            Query Match
                                                                                                                                                                                                   The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rhematoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound because the control of the carcinoma and liver carcinoma and wound

                                                                                                                                                                                         ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to CABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, ce.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL8859 to ABL88267 represent primers and probes used in the exemplification of the present invention.
                                                                                               Matches
                                                                                                                    Query Match

```

The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polypeptides, encode hunan secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating

Claim 11; Figure 72; 359pp; English.

The invention relates to an isolated novel secreted polypeptide (I) and polymicleotide (II). (I) and (II) are useful for treating cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and psychiatric diseases, cardiovascular diseases, respiratory diseases, renal diseases, cargatrointestinal diseases. These may also be used to treat diseases, abnormalities and disorders caused by abnormal
                                                                                                                                                                    New secreted proteins or polypeptides, useful for treating e.g. cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, cancer
                                                                                                                                                                                                                                                    N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Secreted protein; cytostatic; immunosuppressive; vulnerary; vaccine; antiinflammatory; neuroprotective; nephrotrogic; cardiovascular; human; cancer; autoimmune disease; wound healing disorder; infection; haematopoietic disorder; inflammatory disorder; infertility; neurological disease; psychiatric disease; cardiovascular disease; psychiatric disease; cardiovascular disease;

The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO protein sequences of the invention.

                                                                                                                                                                                   Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous systman.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vaccines for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify membrane-bound or soluble receptors. The polynuclectides may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the
                                                                                                                                                                                                                                                              WPI; 2001-483233/52.

```

The present sequence is that of a novel human growth regulatory-like polypeptide (GRLP) mature protein. The sequence is predicted from a novel assembled cDNA (see AAHS6443) based on Hyseq clone number 16372272. The protein has a mol.wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins, growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64%

                     (it inhibits IL-2 or phycohaemagglutinin induced proliferation of peripheral blood lymphocytes). Antibodies raised against the protein can be used to detect cell producing the protein and also for protein purification. Probes derived from DNA encoding the protein (AAQ84051) can be used to detect sequences encoding the protein or related proteins. The protein may be expressed as a fusion protein (conjugated with dihydrofolate reductase (DHFR)).
                                                                                                                                     This protein has melanoma-inhibiting activity and can be used to treat cancer (melanoma, gliobiastoma, neurobiastoma, small cell lung cancer, neuroectodermal tumours) or as an immunosuppressant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                       New melanoma inhibiting protein and related nucleic acid vectors, transformed cells, antibodies etc., useful for t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                           The invention relates to the use of melanoma inhibiting activity (MIA) CC protein and/or its fragments that have anti-inflammatory effects and CC induce systemic immune tolerance or specific T-cell tolerance to MIA CC antigen, for manufacturing a preparation against inflammatory diseases CC and for induction of systemic immune tolerance or specific T-cell CC tolerance in patients suffering from or susceptible to inflammatory CC diseases. A fragment of MIA is useful as a therapeutic substance and is CC useful for manufacture of pharmaceutical preparations against CC inflammatory diseases such as an immune-cell mediated cartilage CC diseases. Paperations against CC diseases like Graves, specifically rheumatoid arthritis, autoimmune CC diseases like Graves, disease, juvenile arthritis, primary CC glomerulonephritis, polyarthritis, osteoarthritis, Sjogren's syndrome, CC myasthenia gravis, Addison's disease, primary biliary sclerosis, CC uveitis, systemic lupus erythematosis, inflammatory bowel disease, CC multiple sclerosis or diabetes. The MIA polypeptides have specific confiction of immunosymptesive account of the immune system intact as compared to the non-specific suppressive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
